

Learning outcomes

Optimising drug delivery to the lungs for people with asthma

- Understand why drug particle size is important in asthma management
- Evaluate the impact of adherence on asthma control
- How to individualise inhaler device choice for patients with asthma
- Provide a review of the key clinical data for *flutiform*[®] inhaler

Complexities in chronic pain – The inherited patient (accredited activity)

- Adopt a sociopsychobiomedical approach to the assessment and management of patients with chronic non-cancer pain
- Apply the 6 As to assess the response to opioids used to manage chronic non-cancer pain
- Utilise best practice principles when prescribing opioid analgesics in the management of moderate to severe chronic non-cancer pain
- Apply appropriate therapeutic structure to opioid prescribing for patients where opioids were initiated by another prescriber
